

UPPER SAUCON TOWNSHIP

2013 ANNUAL DRINKING WATER - QUALITY REPORT

PWSID #: 3390077

*Este informe contiene informacion importante acerca de su agua potable.
Haga que alguien lo traduzca para usted, ò hable con alguien que lo entienda.*

WATER SYSTEM INFORMATION

This report shows the tap water quality for Upper Saucon Township and what it means. **Upper Saucon Township vigilantly safeguards its water supplies, and we are proud to report that in 2013 our water system has met all required Federal and State drinking water health standards.** If you have any questions about this report or your water supply, please contact Chris Cope, Director of Water/Sewer Resources at (610) 694-8680 or feel free to attend any regularly scheduled meeting of the Upper Saucon Township Board of Supervisors. The Board of Supervisors meets at 6:30 p.m. on the second and fourth Monday of each month in the Township Municipal Building located at 5500 Camp Meeting Road.

PARTNERSHIP FOR SAFE WATER

Upper Saucon Township is a proud new member of the American Water Works Association's *Partnership for Safe Water* (Distribution System Optimization Program). Please refer to the last page for details of this performance based program.

SOURCES OF WATER

Upper Saucon Township currently has two water sources. The major source is groundwater from an artesian well (Entry Point #103) located on White Oak Drive near the southern end of the Township. The Township also purchases water from the City of Bethlehem, which is treated surface water from the Penn Forest and Wild Creek Reservoirs located in the Tunkhannock Creek Watershed in Carbon County. This water is then blended with groundwater from the Township's Zinc Mine Well (Entry Point #101). The Zinc Mine Well and water blending station are located on Camp Meeting Road.

MONITORING YOUR WATER

We routinely monitor for contaminants in your drinking water according to federal and state laws. The data, on the following page, show the results of our monitoring for the period of January 1 to December 31, 2013. The State allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data is from prior years in accordance with the Safe Drinking Water Act. The date has been noted on the sampling results table.

UNIT DEFINITIONS:

pCi/L	=	picocuries per liter (a measure of radioactivity)
ppb	=	parts per billion, or micrograms per liter (ug/L)
ppm	=	parts per million, or milligrams per liter (mg/L)

DETECTED SAMPLE RESULTS

Chemical Contaminants								
Contaminant	MCL in CCR Units	MCLG	Level Detected	Range of Detections	Units	Sample Date	Violation Y/N	Sources of Contamination
Nitrate	10	10	2.45	<1.0 - 2.45	ppm	2013	No	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
Arsenic	10	0	4.8	0-4.8	ppb	2/10/12	No	Erosion from natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes
Barium	2	2	0.11	0.013-0.11	ppm	2/10/12	No	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
Selenium	50	50	2.9	2.9	ppb	2/10/12	No	Discharge from petroleum and metal refineries; Erosion of natural deposits; Discharge from mines
Uranium	30	0	1.876	0.1407-1.876	pCi/l	4/25/11	No	Erosion of natural deposits
TTHM's	80	N/A	5.2	0-12.1	ppb	2013	No	By-product of drinking water chlorination
HAA5's	60	N/A	2.8	0-4.6	ppb	2013	No	By-product of drinking water chlorination
Chlorine	MRDL =4	MRDL =4	1.8	1.2 – 1.8	ppm	2013	No	Water additive used to control microbes

Chemical Contaminants (City of Bethlehem Water)								
Contaminant	MCL in CCR Units	MCLG	Level Detected	Range of Detections	Units	Sample Date	Violation Y/N	Sources of Contamination
Fluoride	4	4	0.5	NA	ppm	2013	No	Water additive which promotes strong teeth
TTHM's	80	0	34.2	20.1 - 49.4	ppb	2013	No	By-product of drinking water chlorination
HAA5's	60	N/A	30.8	0 - 37	ppb	2013	No	By-product of drinking water chlorination

Lead and Copper – Data collected in 2013							
Contaminant	Action Level (AL)	MCLG	90th Percentile Value	Units	# of Sites Above AL of Total Sites	Violation of TT Y/N	Sources of Contamination
Lead	15	0	Non-Detect	ppb	0	No	Corrosion of household plumbing
Copper	1.3	1.3	0.235	ppm	0	No	Corrosion of household plumbing

Lead and Copper (City of Bethlehem Water) – Data collected in 2013							
Contaminant	Action Level (AL)	MCLG	90th Percentile Value	Units	# of Sites Above AL	Violation of TT Y/N	Sources of Contamination
Lead	15	0	2.0	ppb	None	No	Corrosion of household plumbing
Copper	1.3	1.3	0.100	ppm	None	No	Corrosion of household plumbing

Entry Point Disinfection Residual							
Contaminant	MinRDL	Lowest Level Detected	Range of Detections	Units	Sample Date	Violation Y/N	Sources of Contamination
Chlorine (EP 101)	1.0	1.16	1.16 – 2.71	ppm	2013	No	Water additive used to control microbes.
Chlorine (EP 103)	1.0	1.00	1.01 – 2.32	ppm	2013	No	Water additive used to control microbes.

* For more information about the City of Bethlehem's report, please refer to the City of Bethlehem Water Quality Report at: http://bethlehem-pa.gov/dept/water_sewer/consumerConfidenece/index.htm

ADDITIONAL DEFINITIONS

AL	<i>Action Level</i>	The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
MCL	<i>Maximum Contaminant Level</i>	The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
MCLG	<i>Maximum Contaminant Level Goal</i>	The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
MRDL	<i>Maximum Residual Disinfectant Level</i>	The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
MRDLG	<i>Minimum Residual Disinfectant Level Goal</i>	The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
MinRDL	<i>Minimum Residual Disinfectant Level</i>	The minimum level of residual disinfectant required at the entry point to the distribution system.
TT	<i>Treatment Technique</i>	A required process intended to reduce the level of a contaminant in drinking water.

WATER HARDNESS, PH & OTHER USEFUL INFORMATION

Secondary Contaminant Analysis

Secondary contaminants are associated with the aesthetic qualities of drinking water, such as taste, smell, color and formation of deposits on plumbing fixtures. When a secondary contaminant MCL is exceeded, you may notice a change in the color, smell or taste of your tap water. Below are some of the more common contaminants that may be found in tap water. We are glad to report that no MCL's have been exceeded for these parameters.

Contaminant Name	MCL	Your Water – Average Results
pH	6.5 – 8.5	6.9
Iron (ppm)	0.3	0.095
Manganese (ppm)	0.05	<0.010
Sodium (ppm)	N/A	10.2
Total Dissolved Solids (ppm)	500	170
Total Hardness (grains per gallon)	N/A	5.1 – 9.9*

**Range reflects the different water supplies that may be in use in this system at any time.*

Hardness Scale:

- 0 – 5 grains per gallon = Soft Water
- 6 – 10 grains per gallon = Moderately Hard Water
- >11 grains per gallon = Hard Water

HEALTH EFFECTS

Currently the Township water supply has no contaminants that have any adverse health effects. All detected chemical contaminants were below the Maximum Contaminant Levels (MCL's) required by USEPA and PADEP. In addition, the City of Bethlehem reported no contaminants that have any adverse health effects. If you would like more information about these results, please call us at (610) 694-8680 or contact the State Drinking Water office at (570) 826-2511. The information below is required language mandated by PADEP.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immune-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. Environmental Protection Agency and Centers for Disease Control guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the *Safe Drinking Water Hotline* (800-426-4791).

INFORMATION ABOUT LEAD

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Upper Saucon Township is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at:

<http://www.epa.gov/safewater/lead>.

EDUCATIONAL INFORMATION

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or human activity. Contaminants that may be present in source water include:

- » Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater run-off and septic systems.
- » Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater run-off, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- » Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- » Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater run-off and residential uses.
- » Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to assure that tap water is safe to drink, EPA and DEP prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA and DEP regulations establish limits for contaminants in bottled water which must provide the same protection for public health. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's *Safe Drinking Water Hotline* (800-426-4791).

PARTNERSHIP FOR SAFE WATER

In 2007 the *Partnership* and the Water Research Foundation developed a project to help distribution systems optimize operations. Membership in the distribution program ensures that water quality improvements can be measured and validated over time. Distribution systems in the *Partnership* program can demonstrate that they are continuously committed to providing safe water 100 percent of the time. Participating systems can also benchmark their performance in relation to other utilities in their region and facilities across the nation. In 2013 Upper Saucon Township became a member of this program and is proud to further dedicate itself to improving the water quality to the people it serves.
